

## Outside Pump Site Holland, NY WWTP

Here is a simple application of how an **eme** 4400M GANTRY Crane can be used to service an outside pump site. By using this Crane, there is easy assembly by one person in less than ten minutes, using just four bolts and no rigging equipment. The 4-bolt clear span and height adjustment mean quick setup, use and tear-down time which results in improved Operator efficiency.

The Clear Span has been reduced to fit this particular lifting application.

The legs can be adjusted to different heights so that the Beam remains parallel.

The Locking 'Surround-Beam' Trolley cannot derail from the Beam which translates to increased Operator safety.

As easy as the GANTRY Crane is to use at this site, getting there is just as easy – in a standard pickup truck. It can be assembled on site by one or two people. No special tools are required.
